

# Favourite Things Assignment – Written Plan

By: Matthew Tenuta

Outcome: In the end, I should have a site with a title at the top, followed by 3 images about my 3 favourite things. On a click of each image, a picture, heading, subheading, and paragraph should come up with details about the thing in there. Then on another click, the lightbox is removed, and you can click another one if you like.

I also want the pictures to animate when you start the site.

Plan:

1. Get a basic site build out with the proper containers to store info
2. Get JS working (will be a pain in the ass)
3. Once JS works, style the whole thing to look pretty
4. Sit back and drink heavily

Things to consider:

- Going to need a way to get specific data into the related image lightbox, not exactly sure yet about this one but we hopefully will figure it out
- Get a cool font for titles
- Use some of my own images from Europe for Travel Section to add a personal touch
